Juniper Sales Guide

Security solutions for connectivity, data centre, applications and content

JUNIPER
NETWORKS®

Juniper's focus on network security

REQUIREMENTS	JUNIPER DELIVERS...
Operational efficiency	Centralised control point
Security efficacy	Breadth, depth, advanced threat prevention
Support for the business	Open architecture, scale, performance

What's changed in Juniper's 2015 security offering?

- More integrated Security on SRX
- Better centralised Junos Space Management!
- From 4 boxes to 2:

Juniper security focus is all about performance and availability

- Carrier-class performance
- First to 100GbE port
- High availability: Six 9's
- 450k connections per second
- 60m concurrent user sessions

"SECURITY THAT KEEPS UP WITH THE SPEED OF BUSINESS CHANGE"

Juniper security solutions overview:

SRX SERIES SERVICES GATEWAYS

High-performance network security with advanced integrated threat intelligence, delivered on the industry's most scalable and resilient platform.

vSRX SERVICES GATEWAYS

High-performance network security in a virtual form factor for rapid deployment and scale-out environments.

SPOTLIGHT SECURE

Integrated real-time threat intelligence to detect and block advanced threats at the firewall.

JUNOS SPACE SECURITY DIRECTOR

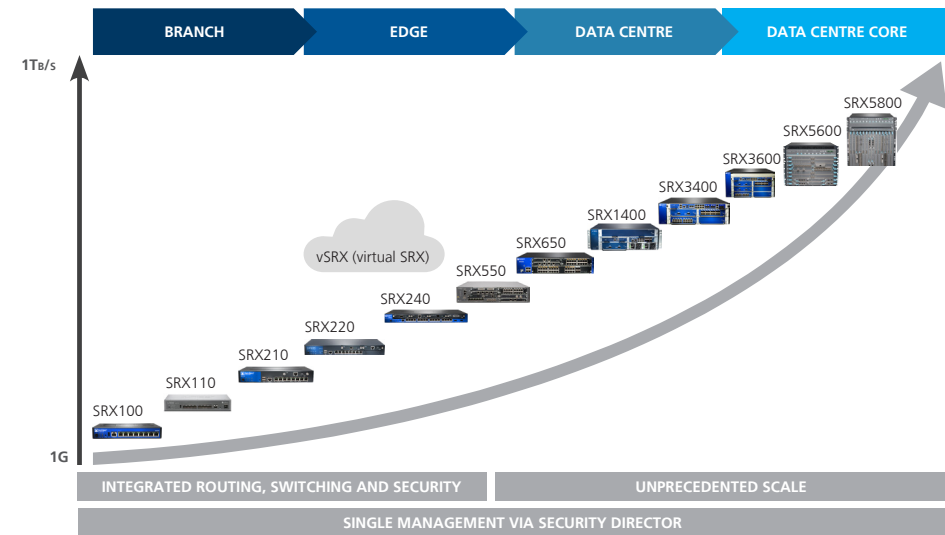

High-performance network security in a visual form factor for rapid deployment and scale-out environments.

SRX Series Services Gateways

NEXT-GENERATION ANTI-THREAT FIREWALL

High-performance security with advanced, integrated threat intelligence, delivered on the industry's most scalable and resilient platform. SRX Series gateways set new benchmarks with 100GbE interfaces and feature Express Path technology, which enables up to 1 Tbps performance for the data centre.

vSRX Services Gateway (formerly known as Firefly Perimeter)

CARRIER-GRADE, INTEGRATED VIRTUAL FIREWALL FOR THE WORLD'S MOST DEMANDING NETWORKS

Designed for enterprises and service providers, the vSRX virtual firewall delivers core firewall, robust networking, advanced security services and automated lifecycle management capabilities in a virtual machine. The vSRX gives you the power and control to deploy scalable firewall protection in highly dynamic environments.

- Unified threat management
- Intrusion prevention system
- Application visibility and control with AppSecure 2.0
- Automated provisioning out of Junos Space Virtual Director
- Running with VMware & KVM

Spotlight Secure

LINKING SECURITY INTELLIGENCE TO POLICY ENFORCEMENT FOR RAPID PROTECTION AGAINST ADVANCED THREATS

Spotlight Secure is a threat intelligence platform that aggregates threat feeds from multiple sources to deliver open, consolidated, actionable intelligence to SRX Series Services Gateways (firewalls) across the organisation. These sources include Juniper threat feeds, third-party threat feeds and threat detection technologies that the customer can deploy. Administrators can define enforcement policies from all feeds via a single, centralised management point, Junos Space Security Director.

What do you need to start?

- Juniper Networks SRX550 Services Gateway or later model — this is for policy enforcement based on threat intelligence feeds
- Juniper Networks Junos Space Network Management Platform
- Junos Space Security Director—This product centrally manages SRX Series firewall policies
- Security Intelligence (SecIntel) Service software

Optional Intelligence Feeds:

- Command and Control (C&C), anti-botnet threat feeds — Malware is identified that is communicating with C&C servers, and botnets are stopped via the SRX Series firewall
- GeoIP feeds — Mapped IP addresses to geographic region data are incorporated into the SRX Series firewall policy for monitoring/blocking traffic from/to specific locations in accordance with business policy
- Attacker device fingerprints — Known attacker device information is utilised for monitoring/blocking traffic using either the SRX Series firewall or WebApp Secure.

Junos Space Security Director

SCALABLE AND RESPONSIVE SECURITY MANAGEMENT APPLICATION

Junos Space Security Director is a network security management product that offers efficient, highly scalable and comprehensive network security policy management.

- Automates:
 - Firewall management
 - IPsec VPN management
 - Network Address Translation (NAT) management
 - Intrusion prevention (IPS) management
 - Application-level policy management
 - UTM unifier threat management
 - Security services

- Publishes workflow: manages policy changes with review/approve cycle
- Delivers scalable and responsive security management
- Improves the reach, ease and accuracy of security policy lifecycle
- Supports physical and virtual
- Firewall policy hierarchy allows for ease of management

Sales & Training at Westcon for Juniper Networks

DEMO UNITS

Boost your Juniper Sales by offering your end user customers an evaluation unit to demonstrate products benefits and features. For more information, please contact your Sales Representative at Westcon.

DO NOT FORGET ON YOUR SALES ORDER:

SUBSCRIPTION

End-user support contact details:

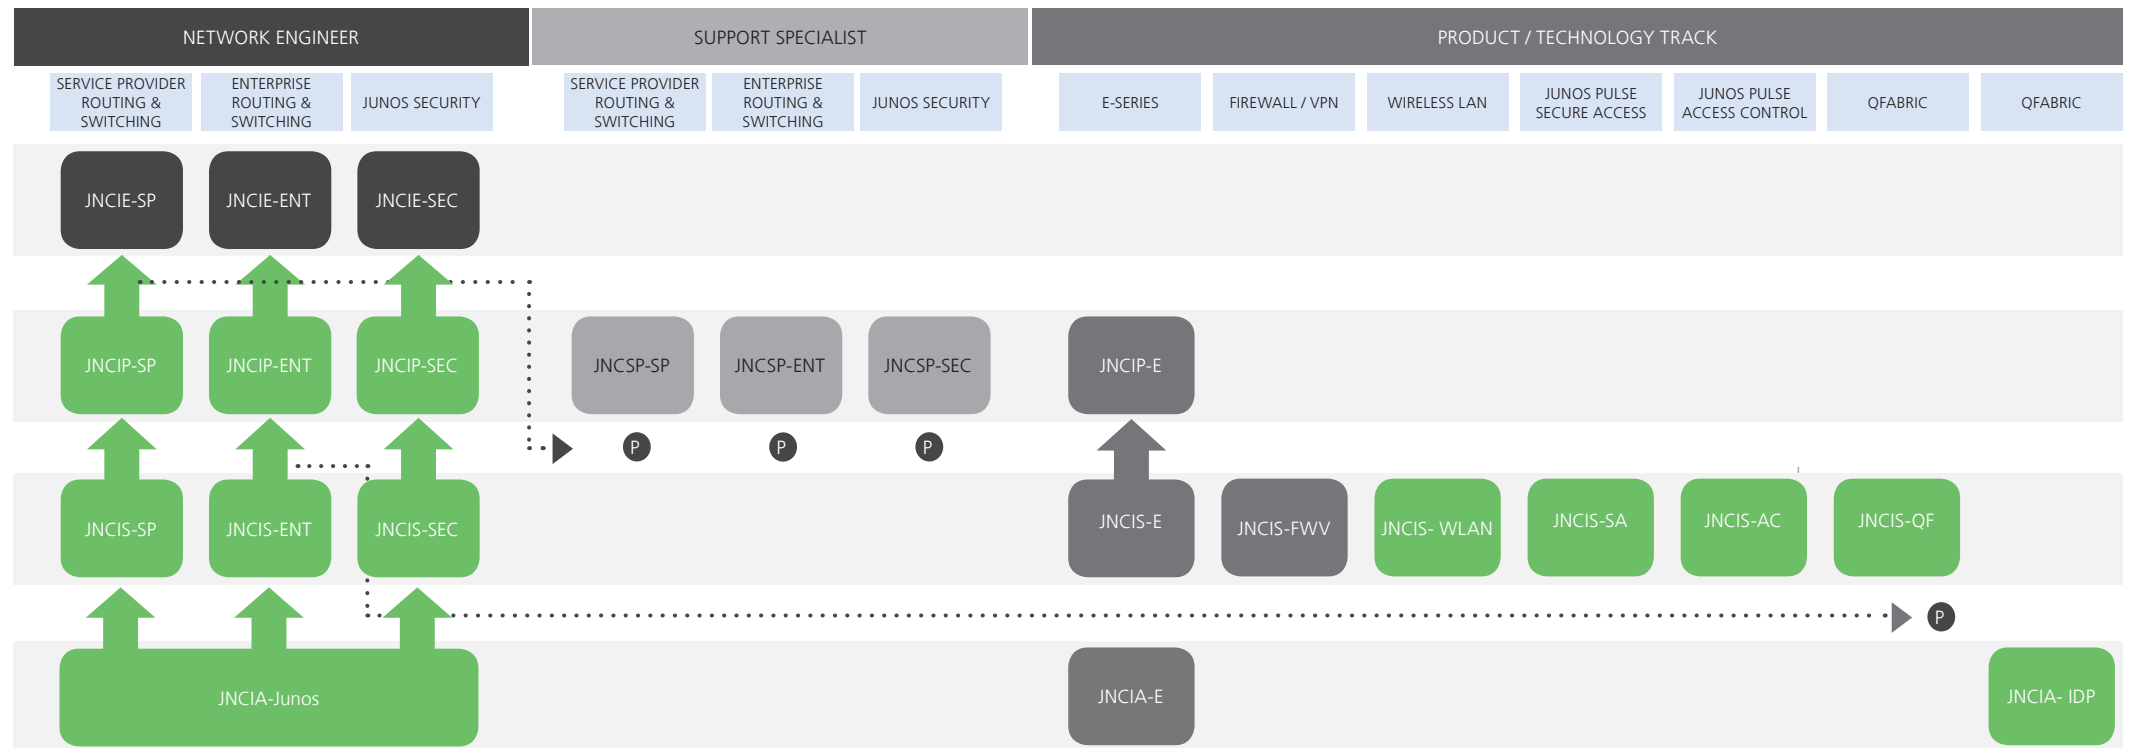

- Contact name
- Onsite address
- Phone number
- Email address

RENEWAL

- End-user name
- S/N or licence key
- Required term dates
